- 1.4 Quarterly PROJECT Progress Meetings:** The CONSULTANT will conduct Quarterly PROJECT Progress meetings with the CITY/SWFWMD and throughout the duration of the PROJECT. (7 total)

- 1.5 **SWFWMD Pre-Application Meeting:** Set up, attend, and conduct a meeting with the SWFWMD Permitting Department to discuss the PROJECT alternatives and permissibility issues for the solutions. This meeting will also be attended by the CITY and the SWFWMD Cooperative Funding representative.
- 1.6 **FDOT Meetings:** Set up, attend, and conduct a maximum of two (2) meetings with the Florida Department of Transportation (FDOT) District Seven to discuss the PROJECT and explore possible coordination with ongoing FDOT roadway projects and obtaining information on current systems and roadways in the study area belonging to FDOT.

2. Basis of Design Report (BODR)

- 2.1 **Data Collection:** The CONSULTANT will collect and review pertinent background information provided by the CITY, SWFWMD, FDOT and THEA, including record drawings and stormwater models, to assist in the development of the hydrologic/hydraulic model using XPSWMM Software. CITY provided data will include, to the extent available, shapefiles of stormwater infrastructure, topographic information, and attribute data pertaining to the impervious area in the subject basin (data used by the CITY for its Stormwater Utility Assessment). The CONSULTANT will also interview a limited number (up to 2) of CITY staff as designated by the CITY in order to retrieve pertinent anecdotal information regarding known flooding issues and to collect pertinent background and existing data that may be useful in developing the stormwater model for the PROJECT basin and the design of any stormwater BMPs.
- 2.2 **Digital Elevation Model (DEM):** The CONSULTANT will acquire a DEM derived from Light Detection and Ranging (LiDAR) data covering the PROJECT area from the SWFWMD. The DEM will be the basis of stage/area curves and overland flows for the existing condition model and general use during model development. This DEM will be reviewed by the CONSULTANT for topographical voids such as areas obscured by heavy vegetation, improvements that post-date the LiDAR flight and subsurface storage facilities. The CONSULTANT will modify the DEM to fill these gaps using survey, Environmental Resource Permits (ERP's) and other data.
- 2.3 **Data Review and Analysis:** The CONSULTANT will review the acquired data and incorporate information as necessary into the BODR. This review will also include stormwater atlas review, existing stormwater model review, and other geographic information as available.

- 2.4 Environmental Resource Permits (ERP) and FDOT Roadway Plans:** The CONSULTANT will develop a list of applicable ERP's and acquire a copy of the existing permits and associated as-builts/plans from the SWFWMD in PDF format. The CONSULTANT will also acquire applicable roadway plans/as-builts from FDOT.
- 2.5 Surveying:** The CONSULTANT will evaluate and compile the available ERP information associated with the PROJECT, data provided by the CITY and FDOT/THEA roadway plans and assemble a detailed list of drainage structures to survey where gaps exist in the data collected in tasks 2.1 through 2.4. This may include field verification of said obtained information for accuracy. The CONSULTANT's PROJECT surveyor will then collect the data listed.
- 2.6 Preliminary Hydraulic Connectivity Network:** After evaluating data collected in Tasks above, the CONSULTANT will develop a Preliminary Hydraulic Connectivity Network in the form of simple Geographic Information System (GIS) features (shapefiles). The network will depict the anticipated location of nodes, pipes, channels, weirs, etc. to be included in the existing conditions model. The preliminary network will be submitted to the CITY for review and comments. The preliminary network will also be submitted to the SWFWMD to demonstrate compliance with cooperative funding requirements.
- 2.7 Stormwater System Development – Existing Conditions:** The CONSULTANT will develop a hydrologic/hydraulic model utilizing XPSWMM software that represents the existing conditions and conveyances for the PROJECT area obtained from the information collected by the CONSULTANT and made available by the CITY and others. The PROJECT area covers approximately 6,000 acres and is bordered by Euclid Avenue to the north, Hillsborough Bay to the east, Old Tampa Bay to the west, and North Boundary Boulevard to the south. Preparing the existing conditions model will include:
- 2.7.1** Catchment delineation: The basis for the delineations will be information from the CITY's Stormwater Atlas, the DEM, a review of available ERP data, and available as-builts drawings for completed CIP projects, the latest aerials dated 2015 provided by the CITY. Catchments will be defined in accordance with the CITY of Tampa GIS Stormwater Model Parameterization Guide. This model will utilize the XP SWMM software for runoff hydrology calculations.
 - 2.7.2** Junction/Reach Connectivity: Relevant conveyance pipes will be modeled. The CONSULTANT, in coordination with the CITY, will make a determination on the appropriate pipe size to be modeled. Nodes will be set up only at junctions where the conveyance reach (e.g. pipe to ditch) or drainage pipe flow area changes. All stormwater conduit data entered from information extracted from ERP records and as-builts will be highlighted on PDF versions of said plans. Selected field survey verification will be conducted for the conduit information being input into the model as deemed necessary as described in task 2.5. Stage-

Storage information will be input into the model rounded to one-foot increments. Once the model hydrologic and hydraulic data is set-up, the junction and reach feature classes for the study area will be populated in GIS in accordance with the CITY of Tampa GIS Stormwater Model Parameterization Guide and subsequently imported into the XPSWMM environment. The model will be set in NAVD88 with a cross reference to any NGVD29 elevations used from historic surveys or existing data.

2.7.3 Model Calibration: The model will be calibrated to available historical data and indicators. The hydrologic data needed for this calibration will be provided by the CITY (high water marks, stream gauges discharge or stage readings, etc.) Model calibration will consider water stages, volumes, and time of occurrence, as made available by the CITY. NEXRAD rainfall data will be utilized for calibration and verified against regional rain gage data provided by the CITY. The model simulation results will be assessed for accuracy and reasonableness.

2.7.4 Coordinate with CITY staff to conduct interviews with residents to determine flooding extent in flood-prone areas where verification data is limited.

2.7.5 Existing Condition 24-Hour Storm Event Model Runs: The CONSULTANT will run the mean annual, 5, 10, and 25-year/24-Hour storm events.

2.7.6 Existing Conditions Floodplain: The CONSULTANT will develop an existing level pool 100-year/24-hour floodplain based on the existing conditions model results. CONSULTANT will also provide a graphical representation of the level pool overlaid on an aerial map.

2.8 Stormwater System Development – Proposed Conditions: The CONSULTANT will investigate possible alternatives for solving the flooding problems of regions with high concentrations of CITY-documented flooding complaints and will identify and rank projects for capital improvements.

The CONSULTANT will develop a maximum of twenty-five (25) capital improvement alternatives for the PROJECT area.

The CONSULTANT will rank the proposed capital improvement project alternatives based on the SWFWMD methodology. As part of this methodology, the CONSULTANT will run the SWFWMD 2.33yr, 5yr, 10yr, 25yr, 50yr, and 100yr 24-hour events. CONSULTANT will also provide a graphical representation of the level pool in a GIS shapefile for one specifically selected rainfall event determined by the CITY after discussion with the CONSULTANT.

The preliminary stormwater system layout will be incorporated into the BODR as conceptual sketches. The results of this investigation and recommendations will also be incorporated into the BODR.

It is anticipated that alternatives ultimately selected for construction will be costly, requiring construction in multiple phases over a 10-year period. Therefore, consideration will be given to a phased approach for the development of alternatives.

- 2.9 Draft BODR:** A draft BODR will be prepared and submitted to the CITY for review. The draft BODR will include:
- 2.9.1** The alternative analysis identifying projects for capital improvements;
 - 2.9.2** A cost estimate for each of the design alternatives;
 - 2.9.3** A prioritization of the projects for long-range planning;
 - 2.9.4** A map showing flooding under existing conditions and under proposed conditions;
 - 2.9.5** A table identifying the reduction in flood stage as determined by the model;
- 2.10 Engineer’s Opinion of Probable Cost:** The CONSULTANT will prepare the preliminary Engineer’s opinion of probable construction cost for each alternative included in the BODR. The estimate will contain information known and acquired at the time of the preparation of the draft report.
- 2.11 QA/QC Review of Draft BODR:** The CONSULTANT will conduct quality assurance and quality control procedures for the draft BODR in accordance with the CONSULTANT’s QA/QC Policy. This work includes senior level review by a professional familiar with this type of work, but not directly involved with the PROJECT; documentation that review comments were addressed; and incorporation of CITY comments as appropriate. The CONSULTANT’s QA/QC Policy is available upon request.
- 2.12 Submit Draft BODR:** Following modifications to the BODR by the CONSULTANT based on QA/QC recommendations, the CONSULTANT will submit three (3) hard copies and an electronic PDF copy of the Draft BODR to the CITY for their review. The CONSULTANT will assume comments will be received from the CITY in two (2) weeks from the time the submittal is received, and a review meeting will be scheduled a maximum of two weeks from the date of receipt of such comments.
- 2.13 BODR Review Meeting with CITY:** Conduct a review meeting with the CITY to discuss comments developed by CITY staff, provide a written summary of CITY comments that will be incorporated into the BODR and develop meeting highlights and distribute to attendees. Any comments from the SWFWMD will be conveyed to the CONSULTANT via the CITY. Upon agreement of modifications to the draft report, a final report will be prepared and submitted to the CITY.
- 2.14 Final BODR:** The CONSULTANT will prepare a final BODR report containing information from the design review meeting with the CITY.

- 2.15 QA/QC Review of Final BODR:** Conduct quality assurance and quality control procedures for the final BODR.
- 2.16 Submit Technical Memo on “Modeling Methodology”:** CONSULTANT will submit to the CITY three (3) hard copies and one CD containing a PDF technical memo on the “Modeling Methodology” describing the methods and assumptions used in setting up the stormwater model and data used for the proposed conditions simulations.
- 2.17 Submit Final BODR:** Following modifications to the draft BODR based on QA/QC recommendations, CONSULTANT will submit six (6) hard copies signed and sealed by a Florida Licensed Professional Engineer of the final BODR and one CD containing PDF copy of the Final BODR.

In lieu of the additional named insured requirement, if the Awardee/Contractor's company has a declared existing policy which precludes it from including additional insureds, the City may permit the Contractor to purchase an Owners and Contractors Protective Liability policy. Such policy shall be written in the name of the City at the same limit as is required for General Liability coverage. The policy shall be evidenced on an insurance binder which must be effective from the date of issue until such time as a policy is in existence and shall be submitted to the City in the manner described below as applicable to certificates of insurance.
