

30th Street Outfall

FY 2017, District 5

Estimated cost: \$600K

- **JUSTIFICATION:**

Existing 60-inch diameter stormwater pipe outfalls to Hillsborough River at 30th St., causing continual erosion of adjoining properties. City crews have installed rip-rap to fortify the banks, but erosion has persisted.

- **PROJECT DESCRIPTION:**

Stormwater has acquired the property on the east side of the outfall. The intent is to enlarge the discharge channel and, if necessary, construct a larger outfall structure to accommodate future pipes.

- **RELATED ISSUES:**

Several stormwater pump stations utilize the existing outfall pipe and expanding the channel will allow for the extension of force mains directly to the river.
